

FUTURE AIR FORCE CONFERENCE

Prague, 20–22 October 2026

Shaping the Next Generation of Air Power

We are pleased to announce the fourth edition of the Future Air Force Conference. The increasing interest from nations, defence industry, academia, and independent aviation experts is a great recognition, but an even greater commitment to the future.

Join leading experts, industry representatives, and military professionals to discuss current trends and future challenges in air operations, emerging technologies, and capability development. The Conference provides a platform for sharing knowledge, experience, and visions for the air force of tomorrow.

Key Thematic Blocks

- **Air Mobility & the Multi-Role Light Aircraft (MLA)**
Transport aircraft development, tactical airlift training, and ISR/ maritime patrol applications. MLA should also be effective in specific combat roles such as light attack, anti-drone interception and close air support.
- **Advanced Sensing & Electronic Warfare**
Passive and active radar systems, radio-electronic warfare, and counter-drone technologies.
- **Armed UAV Operations & Training**
Combat drone integration, mission readiness, and operator training concepts.
- **Protection of Air Bases – multifacing of ground, aerial and asymmetric threats**
Perimeter security, Air and Missile Defence, use of advanced technologies and operational strategies balancing resources.
